## System Design

### Architecture Diagram of the System

\*Note: The image presented for balldontlie API is the official logo

### Components of the Diagram:

- **Sportcred User:** A user that will be engaging with the React web-app (represents the view and controller)
- **Sportcred Admin:** A user from SPORTCRED that is able to make additions to the site from the program by having special privileges (in terms of sending HTTP requests)
- **PC Device:** A compatible device that can host the React web-app (represents the view and controller)
- **Server-Side Device:** A device authorized by SPORTCRED to carry out HTTP requests to make additions to the overall React web-app (including adding trivia questions, etc.)
- **API:** The network endpoints that are accessed by various HTTP requests
- **BallDontLie API:** The API used to access seasonal game information
- **EmailJS API:** The API used to send emails to SPORTCRED users regarding password recovery
- **Application Authentication:** The credentials of the user are base 64 encoded upon registration, and upon login decoded in order to validate the user's login
- **Application Logic:** The code that facilitates the exchange and modification of data from the Neo4j database
- **Neo4j Storage:** The designated backend database to hold all user information
